

**INTERFACE FOR PROCESSING OF AN ALTERNATE SYMBOL
IN A COMPUTER DEVICE**

ABSTRACT

Described herein is a computer-implemented system and method for processing one or more alternate symbols associated or linked to a base symbol. A base symbol is a symbol to which at least one alternate symbol is linked. A base symbol commonly appears on a key of a keyboard or a display of a keyboard, or is a handwritten symbol recognized by handwriting entry software. Examples of alternate symbols are accented characters and punctuation marks that do not appear on a keyboard or are not commonly recognized by a handwriting entry program, and short symbol sequences. An example of a common short symbol sequence is an emoticon used in e-mail messages to convey tone or feelings. An example of a computer device that may embody the system or method is a hand-held computing device.
